

```
// Java program to print ASCII Value of Character  
// by assigning variable to integer  
import java.util.Scanner;  
public class Day3 {  
  
    // Main driver method  
    public static void main(String[] args)  
    {  
        // Character whose ASCII is to be computed  
        Scanner sc=new Scanner(System.in);  
        System.out.println("Enter any character");  
        char ch = sc.next().charAt(0);  
  
        // Creating a new variable of type int  
        // and assigning the character value.  
        int ascii = ch;  
  
        /* Java stores the ascii value there itself*/  
  
        // Printing the ASCII value of above character  
        System.out.println("The ASCII value of " + ch  
            + " is: " + ascii);  
    }  
}
```
